

Yerkyn Shynggys IS-1808k

Mini Project.

Project name: Service for music

Description: Music service for listening to music.

Music service for listening to music. The project will have a registration and login for users, as well as a list of music that the user can add to their playlist. There will also be subscriptions for music, with subscriptions for users there will be discounts for some music. There will be a list of artists and their music. In the app, you can do actions such as view information about users, as well as add music and view a list of your favorite music. You can change your music subscription so that you can view your features and restrictions when you add music.

There will be bins both for the database and for entities.
